MARALA | What data is actually saved?

Inventory: 2026-10-26 | Saved source snapshot: 23 Oct 2026 | Historical data, not forecasts

3,216 daily inflow records

WAPDA: 3,209 pass current checks; 7 withheld

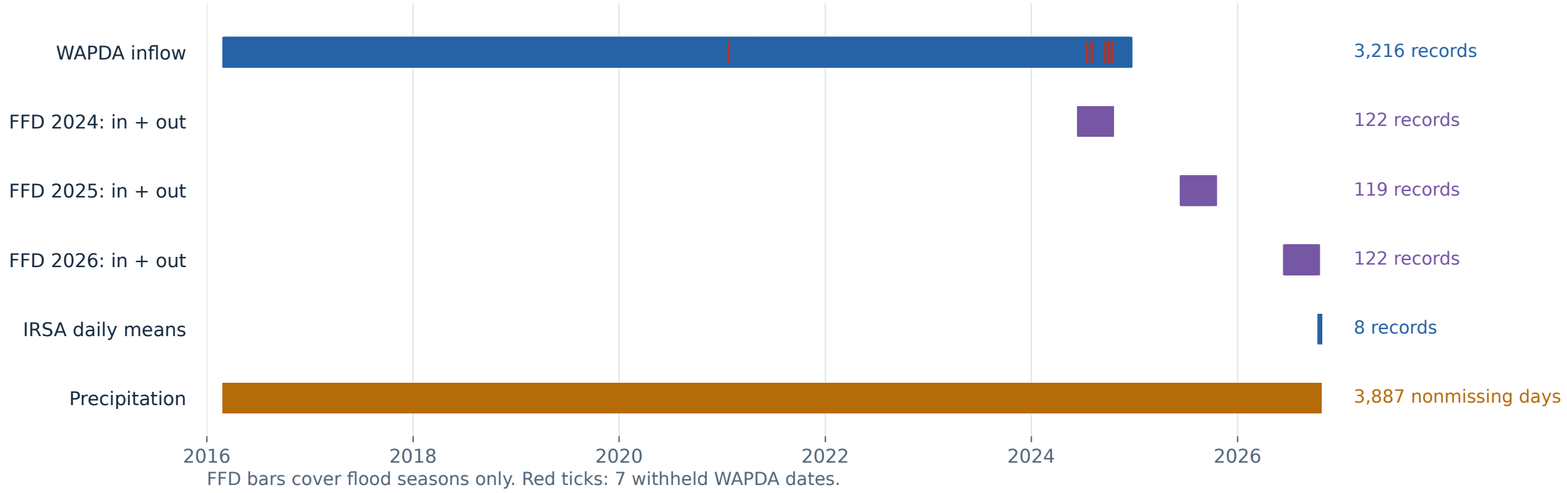

3,887 daily precipitation values

21 catchment cells; rainfall remains on HOLD

28,781 km² upstream catchment

100% geometric grid coverage; research boundary

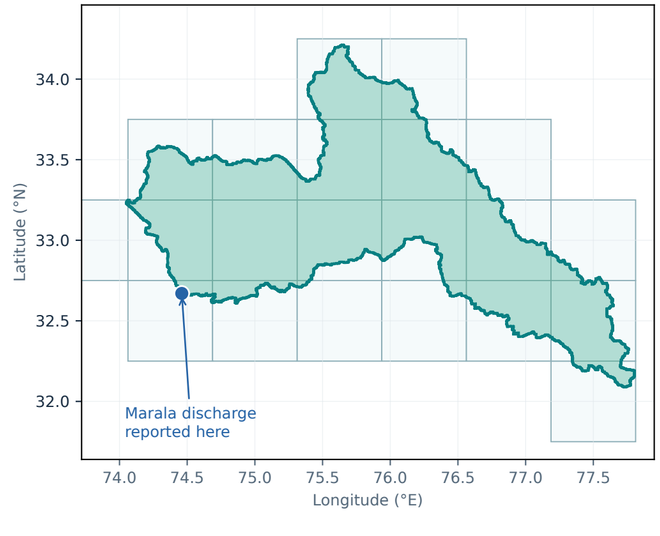

WHEN THE SAVED DAILY RECORDS EXIST

FFD bars cover flood seasons only. Red ticks: 7 withheld WAPDA dates.

PMD's 30 selected event peaks (1970–2016) are listed below; they are not a daily series.

WHERE ONE VALUE APPLIES

WHAT ONE SAVED VALUE MEANS

FEATURE / SOURCE	SAVED AMOUNT / HISTORY	SPATIAL FOOTPRINT	RECORD INTERVAL	TIME REPRESENTED BY ONE VALUE	VALUE TYPE
Inflow discharge **WAPDA**	3,216 dates; 3,209 pass QC 01 Mar 2016–19 Dec 2024	Marala river cross-section (outlet of ~28,781 km² basin)	1 record / day	Duration NOT confirmed Only 19 Dec 2024: 06:00 PKT	Unconfirmed: instantaneous vs mean
Inflow + outflow **FFD / PMD**	363 bulletins; 359 unique dates Flood seasons 2024, 2025, 2026	Marala river cross-section Two separate flow variables	Usually daily Seasonal + gaps	At 06:00 PKT Instrument integration unstated	Point-in-time snapshot Not a daily average
Mean in + outflow **IRSA**	8 reports / 16 flow values 16–23 Oct 2026	Marala river cross-section Two separate mean flows	1 report / day	Daily averaging period Exact clock bounds unknown	Daily average
Flood peaks **PMD journal**	30 selected events 02 Jul 1970–07 Aug 2016	Marala river cross-section	Selected events Irregular	Each event's maximum Event window / time unspecified	Maximum Not a daily average
Precipitation **NASA POWER**	3,887 nonmissing days 01 Mar 2016–21 Oct 2026	Full ~28,781 km² catchment 21 cells: 0.5° × 0.625°	1 value / day	24 hours: 00:00–00:00 UTC 05:00–next 05:00 PKT	24-hour precipitation amount AREA-weighted average; HOLD
Catchment boundary **Global Watersheds / MERIT**	1 saved upstream polygon Source/geometry checks: 23 Oct 2026	28,780.646 km² Includes cross-border headwaters	Static No daily readings	No observation time window	Static research geometry Not agency-certified

RAINFALL TRAINING HOLD

Saved values disagree with independent daily/hourly checks on sampled dates. Matching date coverage does not make rainfall ready for training.

DATE OVERLAP: 01 Mar 2016–19 Dec 2024; all 3,216 WAPDA dates have saved precipitation. 3,209 pairs pass the discharge/date checks only.

NOT YET COLLECTED: temperature, snow, soil moisture, soil properties, reservoir operations, and archived future-weather forecasts.

Spacing between records ≠ averaging duration. Spatial coverage ≠ measurement accuracy. Unknown historical reading times remain unknown. Map: WGS84 research footprint; no political boundaries shown.
